

Globetrotter is...

A mobile application that lets users log in and create custom AI-powered travel itineraries tailored to their preferences. By filling out a travel form, users can generate recommendations for new destinations, activities, and accommodations.

Users can save itineraries to their profile and build a travel wishlist of dream destinations. Globetrotter then automatically generates an itinerary for each wishlist location, helping users plan their next adventure with ease.

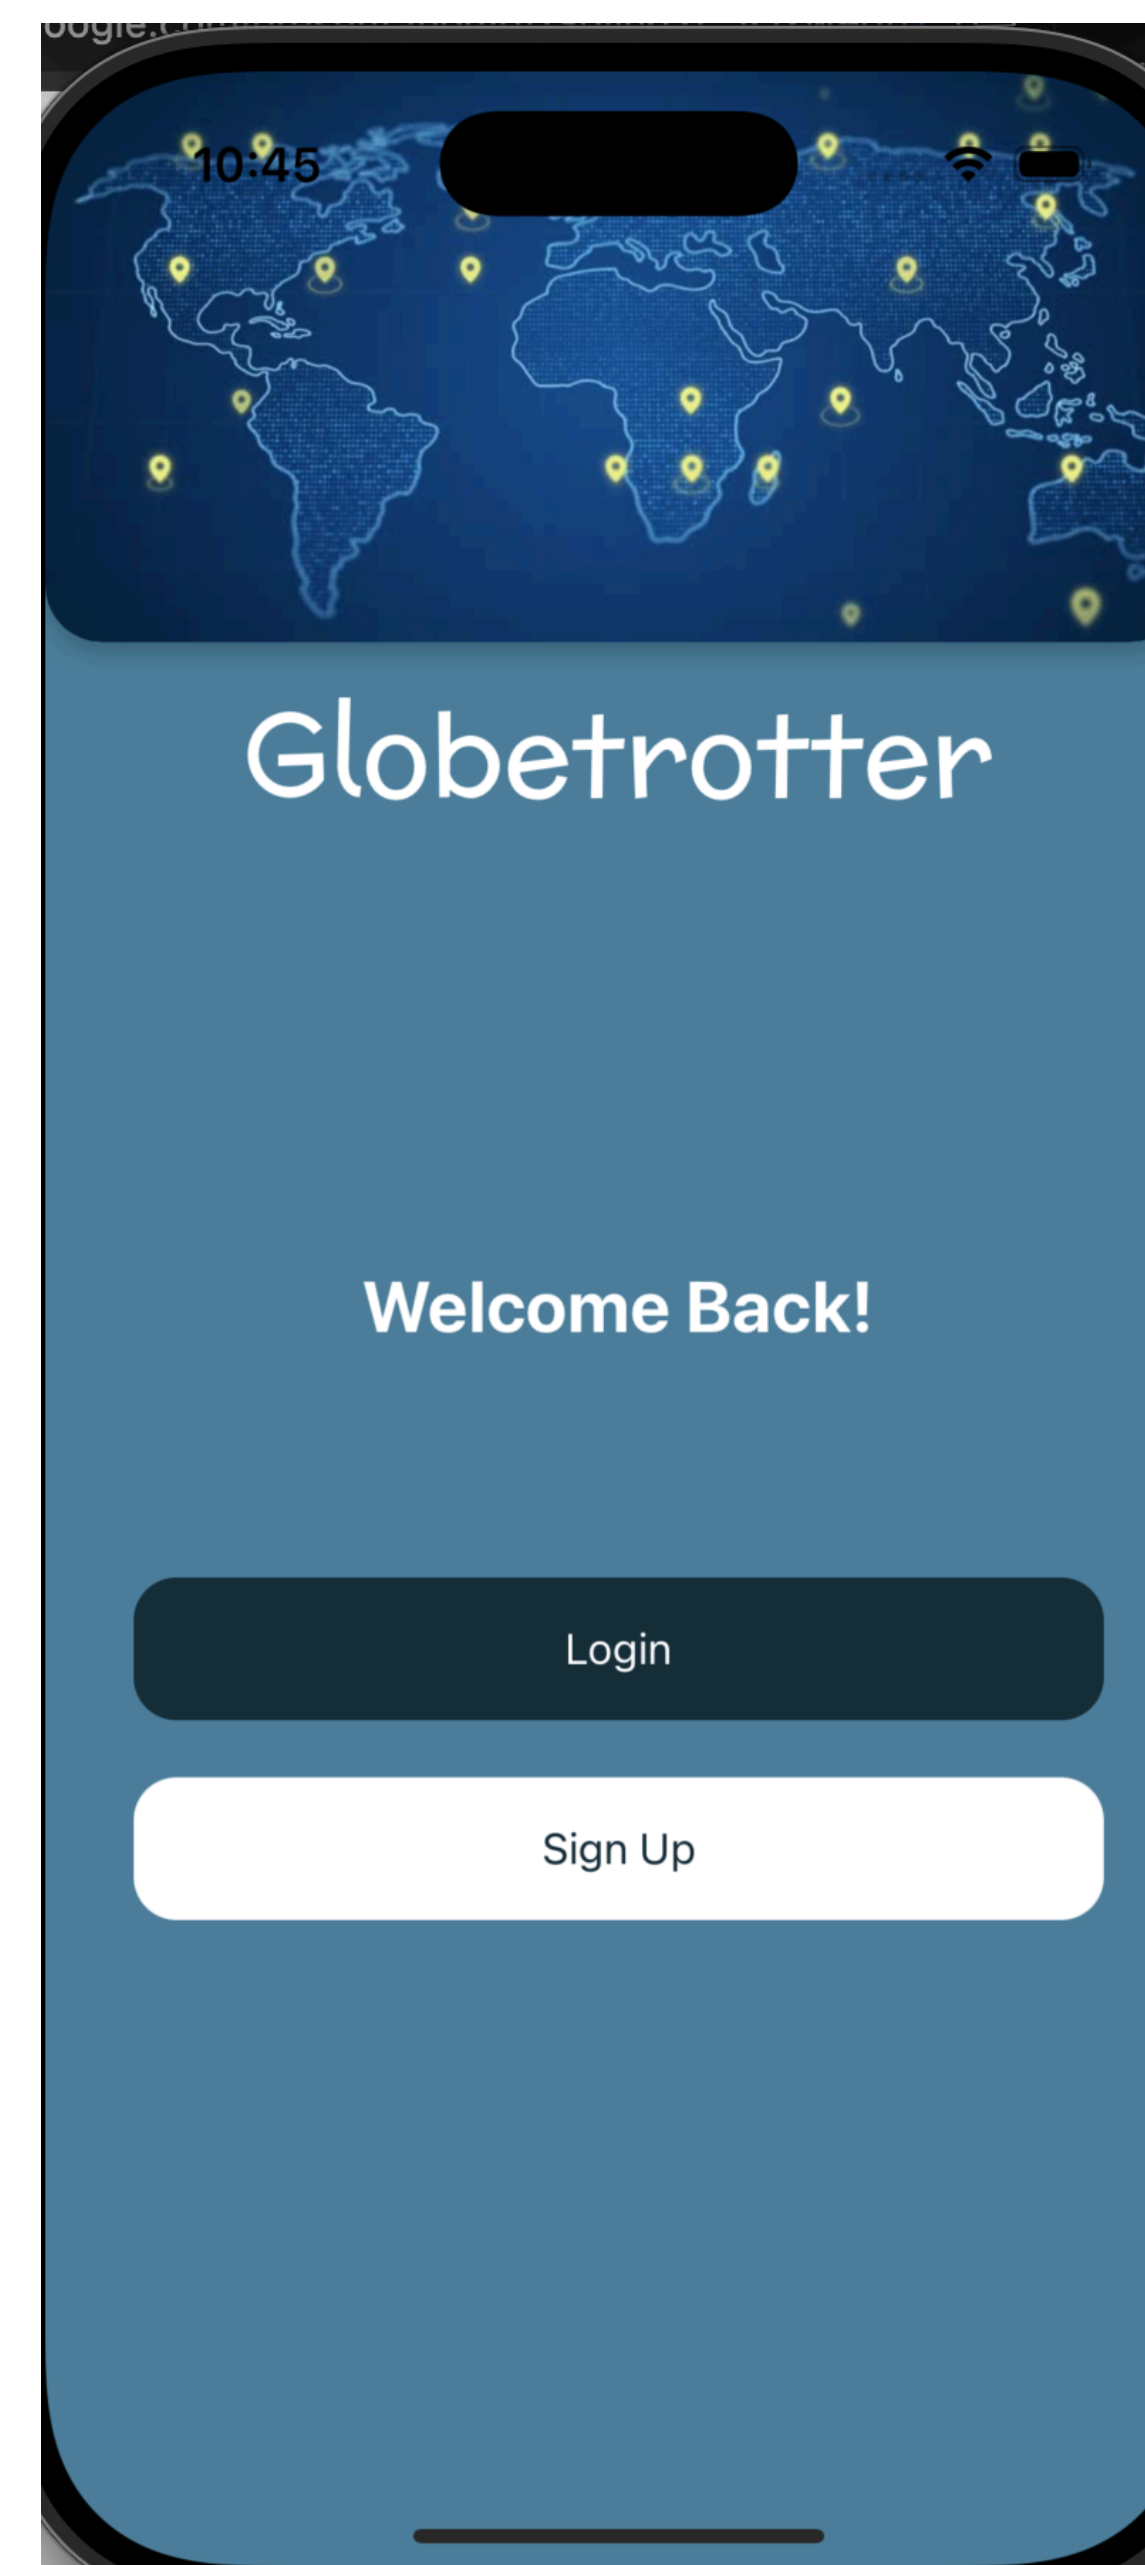

By
Owen Dewing

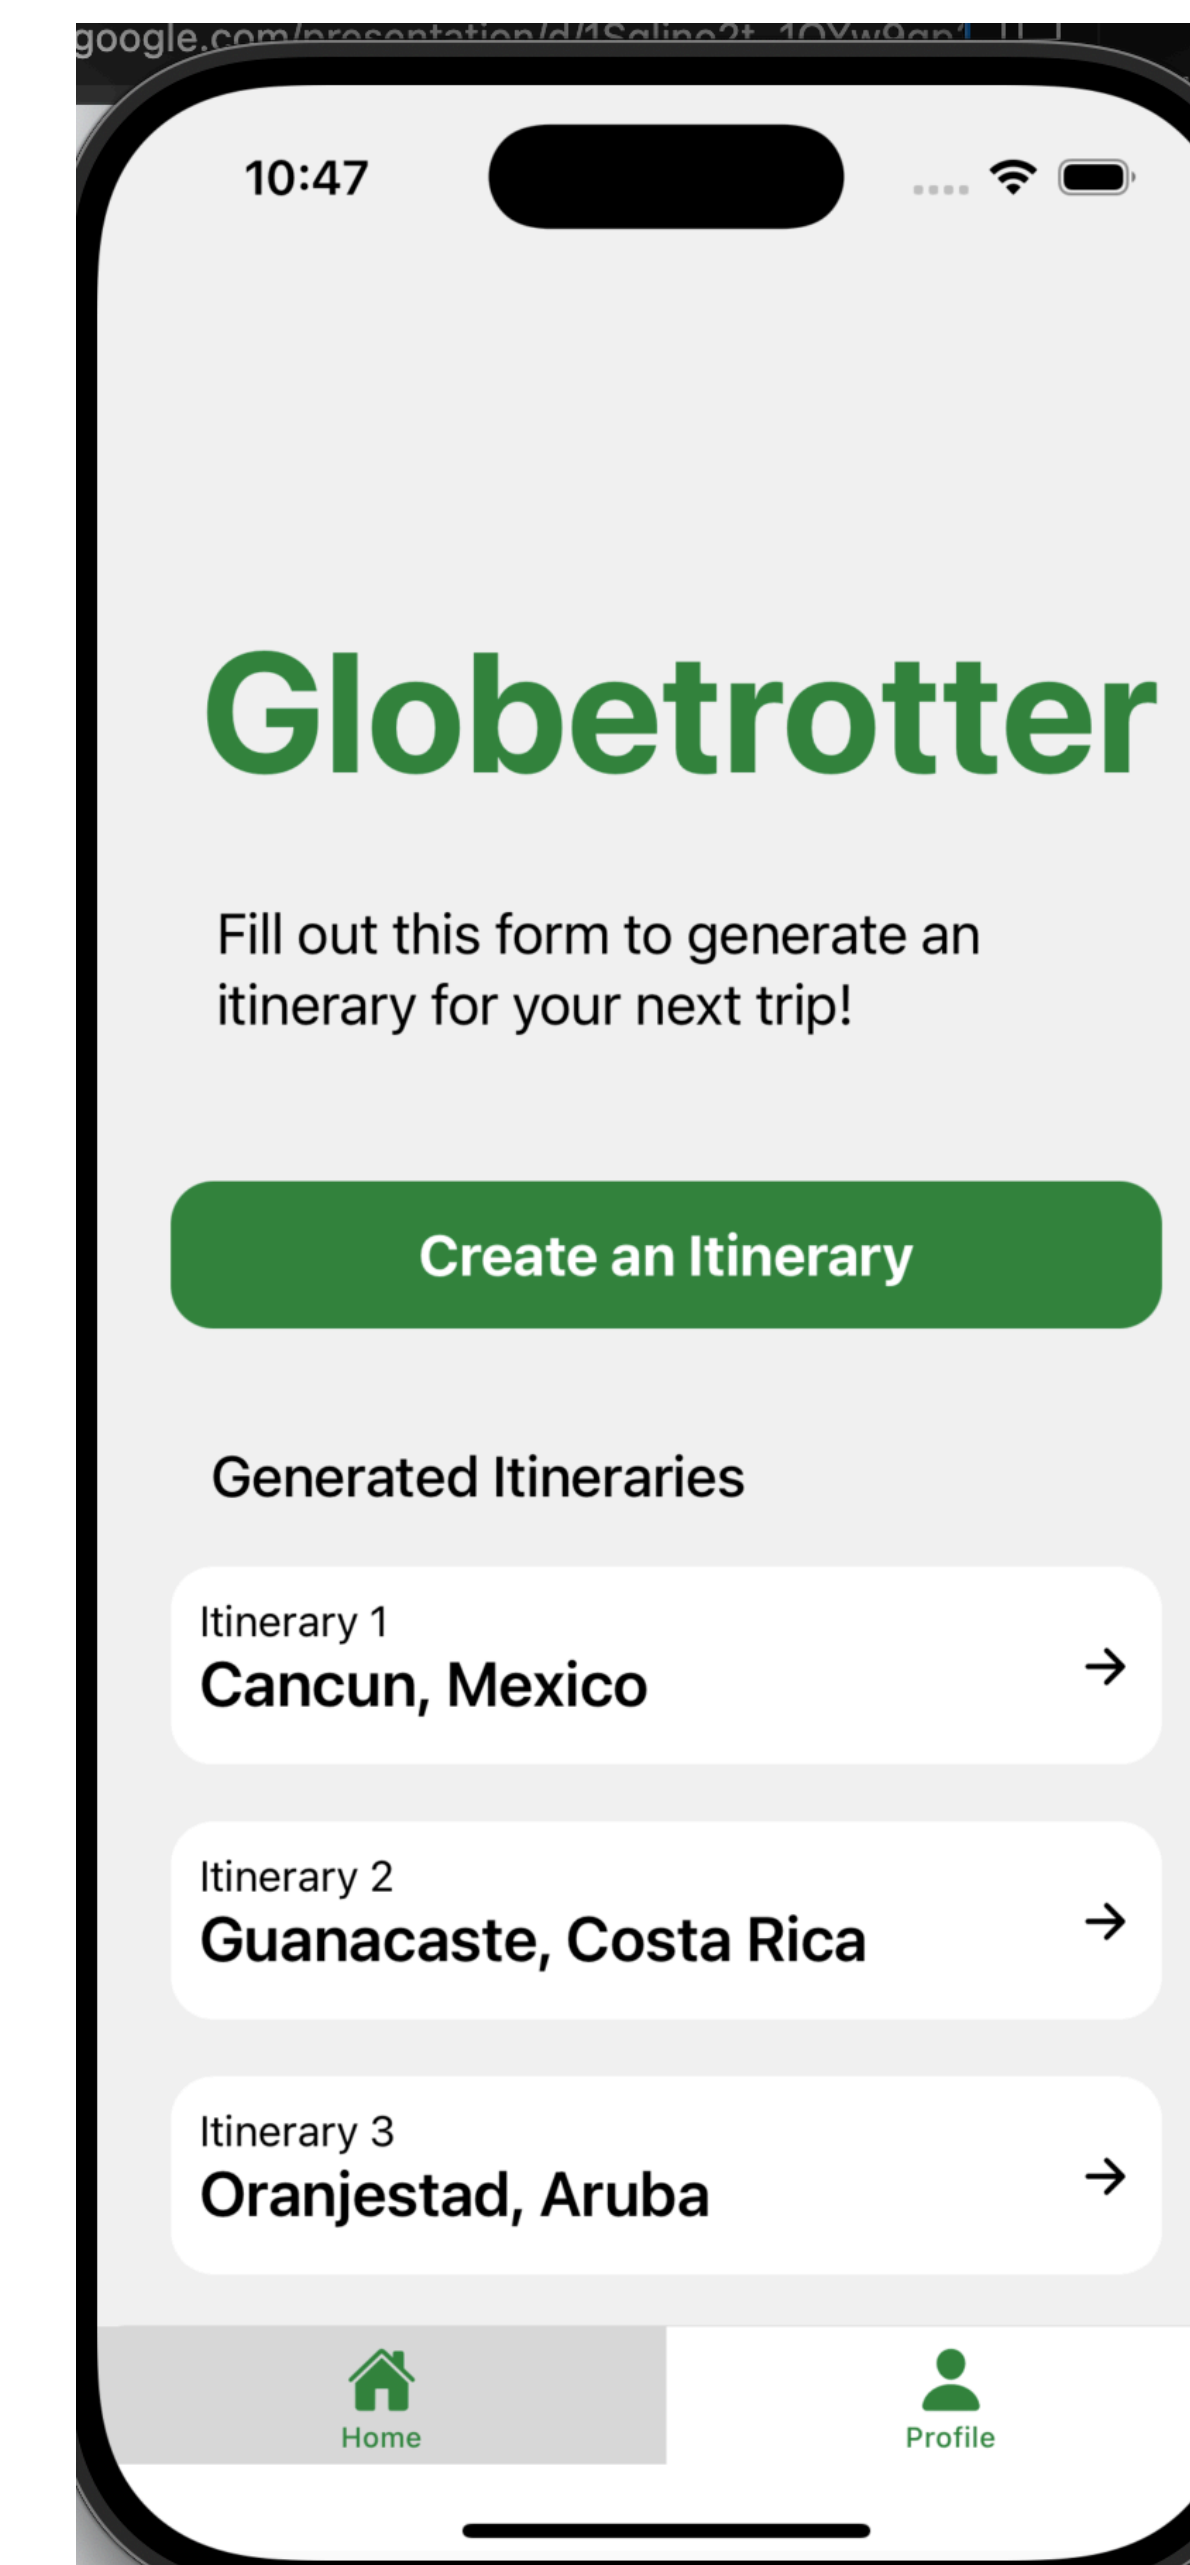

Goals

- To promote travel enthusiasts to discover new destinations
- To provide a place for users to plan and organize future trips.
- To simplify travel planning process and reduces stress.
